Go through Budgets 2.0

Invited [Bogdan Stavrev](#) [Malwina Fojcik](#) [Milan Cvetkovic](#)

Attachments [📎 Go through Budgets 2.0](#)

Meeting records [📄 Transcript](#)

Summary

Meeting discussions aligned on budget feature improvements, display strategies, and streamlined user navigation for budget setup.

Budget Features and Explainer

Team prioritized development of budget features and authorized the creation of a concise budget explainer screen.

Discoverability and Widget Logic

Participants agreed to integrate budget entry points into account overviews and automated spending widget visibility.

Flows and Interaction Refinements

Design decisions finalized the budget creation flow and relocated limit adjustments to interactive components.

Next steps

- ☐ [Malwina Fojcik, Amina] Develop Explainer: Collaborate with Amina defining key benefits for the explainer page.
- ☐ [Malwina Fojcik] Discuss Discoverability: Initiate conversation with Eustenas and Artum regarding the quick fix for budget discoverability entry point design.

- ☐ [Malwina Fojcik] Share Icons: Share the 10 or 12 new icon options after the meeting for review.
- ☐ [Malwina Fojcik] Check Naming: Ask Amina for suggestions on the budget details name.
- ☐ [Malwina Fojcik] Write Explanations: Write explanation text for the action screen today.
- ☐ [Malwina Fojcik] Update Frequency: Change frequency display name to Resets Every or similar phrasing. Add an informational icon allowing users to click and understand the meaning.
- ☐ [Malwina Fojcik] Finalize Designs: Complete design flows including the separated screen for changing limits. Make all agreed screens pixel perfect by tomorrow morning.
- ☐ [Bogdan Stavrev] Provide Benefit Text: Send text suggestions to Malwina outlining additional budget benefits for the explainer page.

Details

- **Budget Features and Fixes Overview:** Bogdan Stavrev outlined several features and fixes for budgets, including addressing copyrighting wording, making budgets more discoverable, removing transaction limits, and incorporating budget notifications and card actions. They also discussed personalizing budgets with more icons and custom pictures, though custom pictures were deemed out of reach for the current timeline. Bogdan Stavrev noted that they had already fixed the current order and added a budget explainer page to the agenda ([00:00:55](#)).
- **Budget Explainer Page Content Strategy:** The team agreed that the budget explainer page needed to be "punchy" because there were numerous aspects to discuss regarding budgets. Malwina Fojcik requested more brainstorming to determine which points should be surfaced, and they decided to involve Amina in the content creation ([00:00:55](#)). Bogdan Stavrev emphasized stressing the fact that users can set money aside, spend from it, and control expenses, highlighting the spending feature as a unique advantage compared to competitors who may charge for a card ([00:01:46](#)).
- **Improving Budget Discoverability:** Malwina Fojcik addressed the difficulty of improving budget discoverability, noting that it would require collaboration with other teams. They proposed incorporating budgets into the company switcher/account overview, allowing users to open budgets directly from there

(00:02:33). While acknowledging this might not be a quick win, they suggested a potential temporary design within the accounts section, which Bogdan Stavrev supported as a valid entry point (00:03:34).

- **Next Steps for Discoverability and Icon Changes:** Malwina Fojcik committed to discussing the proposed discoverability changes with Eustenas and Artum, and Bogdan Stavrev requested to be included in the conversation to offer support. The team also acknowledged that the budget icon needed to be changed, as a new icon was available. Malwina Fojcik confirmed they would share additional icons (10-12 more) with Bogdan Stavrev and would work with Amina on auto-suggested names (00:04:21).
- **Budget Spending Widget Naming and Display:** The team discussed the naming of the spending widget, with Bogdan Stavrev suggesting it be named the same as today's budget details or potentially "budget limits" (00:05:20). They concluded that the widget should only be shown if no budget limit is set and should disappear once a limit is established (00:06:07).
- **Budget Creation Flow and Notifications:** The flow for creating a budget involves naming it and picking an icon (00:06:07). They agreed that the push notification confirming the budget is ready should lead the user directly to the action/flow, rather than the budget overview, to expedite the setup process. Bogdan Stavrev noted that they needed to add an explanation about the actions in the flow (00:07:01).
- **Card Management in the Budget Flow:** Regarding card management, the current system requires a mandatory fork in the flow to differentiate between adding a card for an administrator versus adding one for others (00:07:01). Malwina Fojcik maintained this design, anticipating that the underlying issue will be prioritized for resolution in Q3, making it easier to adapt the existing design later (00:08:05). Adding funds to the budget was identified as a necessary step in the setup, as a budget with no money is unusable (00:08:59).
- **Funding Limitations and Explainer Text:** Bogdan Stavrev confirmed that a budget can only be funded from a user's BCA, not from external third-party bank accounts. They determined that this limitation needed to be explained within the app, as it is currently not made clear to users (00:08:59).
- **Budget Empty State and Edit Functionality:** Malwina Fojcik presented the empty state design for a newly created budget where the user has not completed the setup steps, which includes entry points for setting limits, adding cards, and editing the budget. They confirmed they were removing the ability to set or change limits from the "Edit budget" view to simplify it to only include name changes and budget deletion (00:10:00). Changing limits will be

done directly within the main budget view through an interactive component ([00:10:54](#)).

- **Clarity on Limit Changes and Frequency Display:** Milan Cvetkovic inquired about how users would change limits now that the function was removed from the edit screen, and Malwina Fojcik clarified that users would click an interactive element (a chevron) in the main view, which would take them to a separate screen to change the limit ([00:10:54](#)) ([00:12:41](#)). The team also discussed changing the term "Frequency" to something like "resets every" and adding an informational icon with an explainer for users to better understand the concept ([00:11:43](#)).
- **Future Development of Card Assignment and Action Items:** Bogdan Stavrev mentioned that the ability to assign a card from one budget to another is part of a larger account-level card problem that needs to be solved ([00:13:33](#)). Malwina Fojcik finalized the next action points: finishing the current designs and flows, prioritizing the discoverability conversation with Artum, and sharing the new icons. The team also decided the budget explainer screen should appear the first time a user opens the budget creation flow ([00:14:21](#)). Bogdan Stavrev committed to sending text direction for the benefits to be surfaced on the explainer screen ([00:15:16](#)).
