Objective & Scope

This section extends the existing onboarding PRD (business and general user onboarding) to cover **employee onboarding when invited by employers for benefit cards** in India.

Objective

- Enable employers (corporates) invite their employees into a **use case offered by Tide (Benefit/Expense)** proposition (e.g., meal/fuel/telecom/rewards wallets).
- Ensure invited employees follow a **use case (Benefit/Expense) specific onboarding flow**, distinct from the Business current account onboarding flow.
- Support both **new** and **existing** Tide members, with clear behaviour based on their KYC status (KYC0 / RM / Full KYC).
- Respect India-specific practices and constraints (e.g., mobile-first, email optional, corporate-led benefit programmes, RBI/PPI norms around KYC tiers).
- Support employer to view enrichment details in payout file for easy payout.

Note: Members can not be linked to more than 1 corporate at a time. Conflicts mentioned [here](#).

In Scope (for this section)

roduced for benefit cards use case in current phase.

ation and invite creation for employees.

for employees (employee ID, mobile, optional email, system-
d), Location, Subsidiary, product code embedded in invite

ary, loaction entered by the employer for the employee to be
h will be shown to the employers in employee tab for

employee information.

- Employee onboarding journey after invite:
 - New Tide members (no existing relationship).
 - Existing Tide members (KYC0 / RM / Fully KYCed).
- How employees see and accept invited use case (benefit card) invitations.
- How employers see employee onboarding status and final onboarded details in **Employee Management**.

Product code and the Tab to be supported:

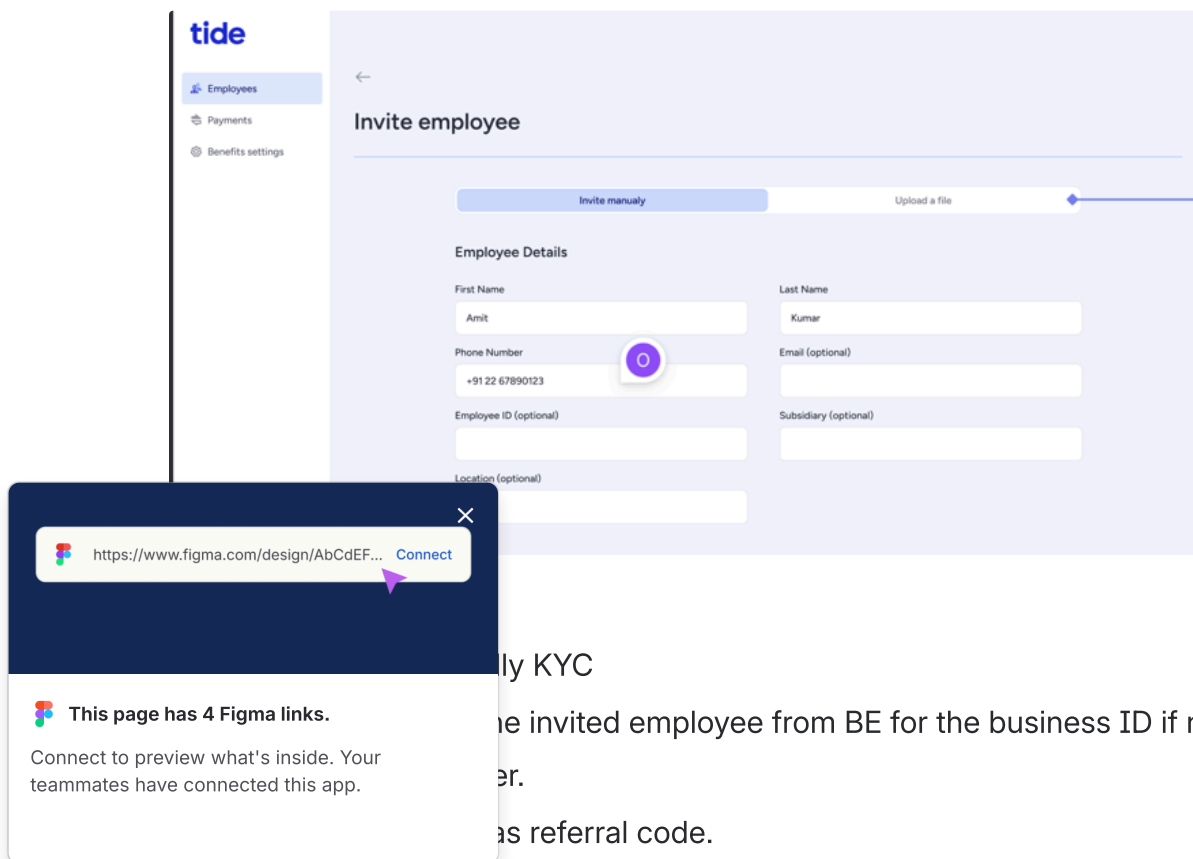

Product code:

If SP (employer) has benefit card enabled then below are possible product code.

- Benefit, Rupay
- Benefit, Rupay and Instant card

Employer Tab:

In “Employee“ tab SP (Employer) should be able to view bulk lead and employee invite option with employee data enrichment fields such as employee ID, mobile, optional email, Location, Subsidiary.

ly KYC

he invited employee from BE for the business ID if no referral

er.

as referral code.

- If invited for benefit and member has expense referral, do not update.
- New Employee
 - Referral code link will be shared which will be applied for the business.

High-Level Flow Overview

1. Employer prepares employee list

- Via bulk upload (CSV/Excel) or manual addition.
- Provides **Employee ID**, **mobile number** (mandatory), optional **email**, and optional internal mapping attributes (Emp Code, Subsidiary, Location, etc.).

2. System registers leads and generates invites

- Creates an **employee invite record** per employee.
- Assigns a **system-generated unique identifier** and associates a **product code** for the benefit card.
- Sends invite via SMS and/or email, based on available contact details.

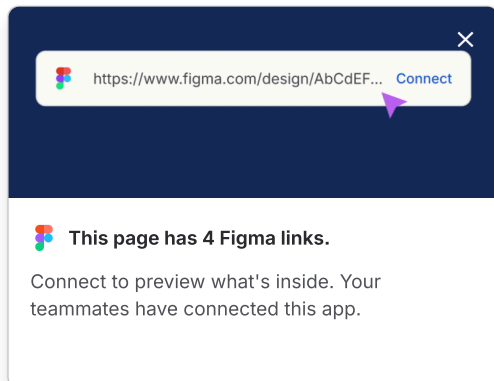

3. Employee receives invite and starts onboarding

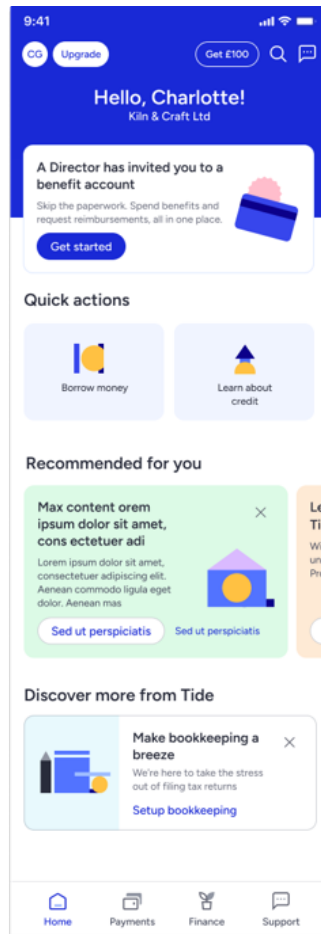

- Clicks the invitation link (from SMS/email).
- Link triggers the **Benefit Card**, not the Business current account flow.

4. Employee onboarding behaviour depends on membership & KYC state (use Referral code)

- **New member:** Proceeds through a simplified benefit-card/Expense onboarding/KYC journey.
- **Existing member (KYCO / RM):** Sees a clear entry point within their existing app session (banner/CTA) to accept the employer's programme and complete KYC if needed.
- **Existing member (Full KYC):** (Benefit card product code is activated for the employee) Sees an invitation card/notification on the Home tab to accept the employer programme; post-acceptance, relevant wallets become visible.

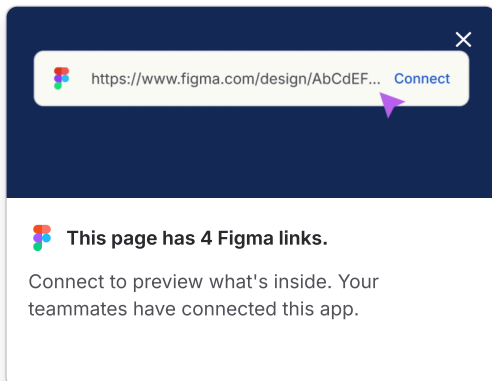

Existing member (KYCO / RM):

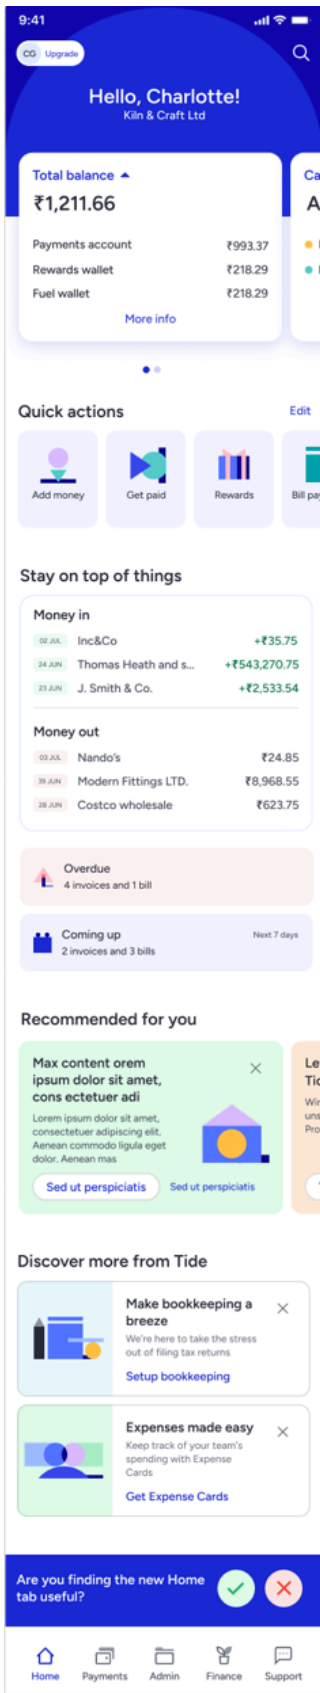

Existing member (Full KYC)

Banner under recommended for you section, triggered when product code is identified.

- **Bulk upload** (CSV/Excel).

• **Bulk upload** (CSV/Excel).

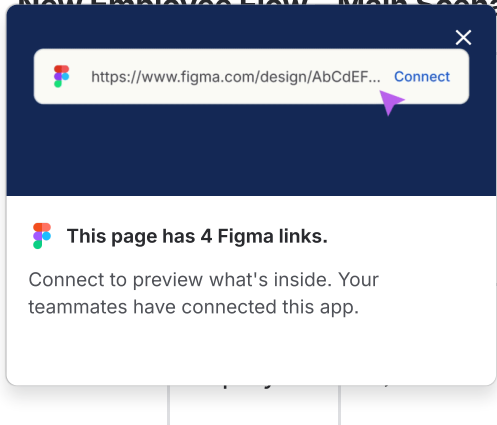

- **Single/manual entry** (for pilot or small numbers).
- For each uploaded/entered employee record:
 - Validate **Employee ID** and **mobile number** presence and format.
 - Optionally validate email format if provided.
 - Generate an **employee invite record**:
 - Fields include Employee ID, mobile, optional email, empirical attributes (Emp Code, Subsidiary, Location, etc.), system-generated unique identifier, and product code.
 - Generate an **invitation link** embedding:
 - Product code.
 - Employee invite record to identify the employee
 - Employer/Corporate ID and programme context (where applicable).
 - Send invitation via:
 - **SMS** (primary, using mobile number).
 - **Email** (if provided).

Employee – New to Tide

Use mobile number as an identifier

1. Employee clicks invite link from SMS/email.
2. System checks if mobile/email is already associated with a Tide account:
 - If **no match** → treat as **new Tide Member**.
3. Employee is guided through **benefit-card onboarding**.
 - a. product code to be passed to onboarding service to trigger benefit card onboarding flow.
4. On successful onboarding:
 - Benefit card/wallet(s) are created and linked to.
5. Employer's Employee Management updates:
 - Status to "Active"

New Employee Flow – Main Scenarios

 https://www.figma.com/design/AbCdEF... Connect This page has 4 Figma links. Connect to preview what's inside. Your teammates have connected this app.	System Behaviour	Employee Experience	Employer View (Employee Mgmt)	Notes / Open Points
	Invite created;	Clicks link, sees	Row updated	Final status

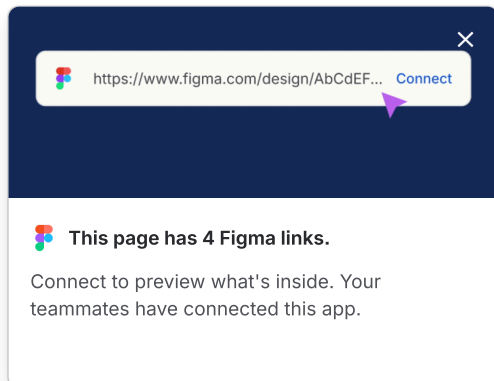

invited with mobile only		SMS sent; benefit product code embedded in link	benefit-card onboarding flow; completes mobile OTP, basic data, KYC steps	with final Name, mobile, status “Active”	labels must align with SP Service
New employee invited with mobile + email	Employee ID, mobile, email	Invite created; SMS+email sent	Can click from either SMS or email, same flow	Same as above; both contact methods stored; Employer sees final email used	Confirm priority if employee changes email during onboarding

Employee – Existing Tide Member (KYCO / Fully KYCed)

When the invited mobile/email already belongs to an existing Tide account, the behaviour should respect KYC state and ensure the **benefit-card entry point** is clear and separate from business onboarding.

A. Existing Member – KYCO / RM (Minimal KYC)

- On clicking the invite link:
 - System detects an existing account tied to the invited mobile/email.
- Expected behaviour:

logged in), the employee is taken to:
 (e.g., banner/CTA) explicitly labeled “Join your employer’s
 valent. (To be configured on flutter)
 Employee can:
 tation.
 or the benefit product.

- Benefit wallets/cards are created and tied to the employer's programme, subject to KYC level rules (limits, restrictions).

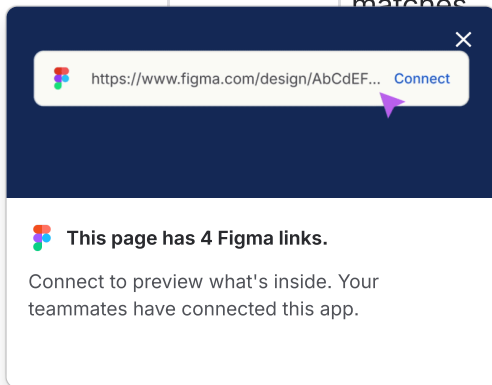

Existing Member – Fully KYCed

on clicking the link the benefit accounts are created.

- On clicking the invite link or subsequent logins:
 - System recognizes existing fully KYCed member.
- Expected behaviour:
 - Show a **dedicated invitation card/notification** on the Home tab (or equivalent):
 - Indicating the employer's name and programme.
- All relevant benefit wallets (Meal, Fuel, Telecom, Rewards, etc.) linked to the employer are provisioned and visible.
- If the employee does not act immediately:
 - The banner will be shown in recommended for you section.

Existing Member Scenarios – Summary Table

Scenario	Input (Employer)	System Behaviour	Employee Experience	Employer View (Employee Mgmt)	Notes / Open Points
Existing Tide user with same mobile as invite (KYC0/RM)	mobile number , and other enrichment info (mobile number matches	Recognize existing account; tie invite to that account; expose Benefit Card entry point after login	Sees CTA to “Join employer’s benefit programme”; completes any additional KYC required, then accepts invite	Sees employee row with final Name/mobile/email from existing account; status “Onboarded/Active” once accepted & KYC OK	

Existing full KYC member	mobile match existing fully KYCed account	Recognize full KYC; show invite card on Home with employer details; easy accept	clicks on the invite, immediately sees created wallets (Meal/Fuel /etc.)	Status updated to "Active"
