6. Detailed Scenarios

7. Functional Requirements

8. Edge Cases & Validation Rules

9. Open Questions

1. Executive Summary

The Benefit Wallet's Telecom & Data wallet currently allows corporate employees to submit reimbursement claims for telecom expenses without any validation of the underlying connection being claimed. This creates significant compliance gaps, fraud risk, and operational overhead for the Ops team reviewing claims.

This PRD defines requirements for a Connection Whitelisting feature that mandates employees to register and verify their mobile, broadband, data card, or landline connections before submitting a telecom reimbursement claim. During claim submission, employees must select a whitelisted connection, which is then linked to the claim record and made visible to the Ops team during review.

Business Value:

- Compliance: Ensures claims are tied to a real, registered connection owned or used by the employee.
- Fraud Reduction: Prevents duplicate, fabricated, or irrelevant telecom claims.
- Auditability: Creates a traceable link between each claim and a specific connection
- Ops Efficiency: Reduces manual validation effort by surfacing connection details directly in the approval interface.

2. Problem Statement

2.1 Current Gaps

- Employees can submit telecom reimbursement claims without specifying which connection (mobile number, broadband account, etc.) the claim is for.

- There is no system-level validation to confirm the connection belongs to the employee or is eligible for reimbursement.
- Ops team has no structured data on the connection being claimed — they rely solely on uploaded bills, which may be inconsistent or unverifiable.

2.2 Risks

Risk Category	Description	Impact
Duplicate Claims	Same bill may be submitted multiple times across different claim cycles without detection.	High
Irrelevant Claims	Claims submitted for non-telecom expenses or ineligible connection types.	Medium
Lack of Traceability	No structured audit trail linking a claim to a specific connection number or type.	High
Ops Inefficiency	Ops team manually cross-checks bills, increasing review time and error rate.	Medium

2.3 Operational Inefficiencies

- Ops reviewers spend disproportionate time verifying connection details from uploaded bill images.
- No standardized data field for connection type/number makes reporting and auditing difficult.
- Escalations and rejections due to missing or unclear connection information increase turnaround time.

3. Goals & Success Metrics

Goal	Success Metric	Target	Measurement Method
Reduce invalid telecom claims	% reduction in rejected/invalid telecom claims post-launch	≥ 30% reduction within 3 months	Claims dashboard – rejection rate comparison
Improve Ops validation efficiency	Average time to approve/reject a telecom claim	≥ 25% reduction in review time	Ops workflow time tracking
Increase claim traceability	% of telecom claims linked to a verified connection	100% (mandatory field)	Database query on claim records
Reduce duplicate claims	% of duplicate connection-based claims flagged/blocked	≥ 90% duplicate prevention rate	Duplicate detection logs
Employee adoption	% of active telecom wallet users who have whitelisted ≥ 1 connection	≥ 80% within 60 days of launch	User onboarding funnel analytics

4. User Personas

Persona	Role	Goals	Pain Points (Current)	Needs from this Feature
Employee (Claim Submitter)	Corporate employee enrolled in Benefit Wallet	Submit telecom claims quickly and get reimbursed	Claims rejected due to missing/uncl ear connection	Simple connection registration; easy selection during claim;

		without rejection	info; no guidance on what's acceptable	clear confirmation of submission
Ops Team (Reviewer/Approver)	Internal operations staff reviewing and approving claims	Validate claims accurately and efficiently; maintain compliance	Manual bill verification; no structured connection data; high rejection/escalation rate	Structured connection details (type + number) visible in claim review interface; reduced manual effort
Admin / Compliance (Optional)	HR Admin or Compliance Officer managing benefit policies	Ensure telecom claims comply with company policy; audit readiness	No audit trail linking claims to specific connections; difficult to generate compliance reports	Audit logs of connection additions; connection-to-claim linkage in reports; ability to view employee connection lists

5. Scope

5.1 In Scope

- Connection whitelisting module: Add, view, and manage connections (max 4 per employee).
- Connection types: Mobile, Data Card, Broadband, Landline — each with Prepaid/Postpaid subtype.
- Mandatory 'Select Connection' field in the telecom reimbursement claim form.
- Inline 'Add New Connection' flow accessible from within the claim form.

- Validation rules: 10-digit mobile number, +91 auto-prefix, duplicate prevention, max 4 connections.
- Connection details (type + number) displayed in: claim summary page, claim history (employee view), and claim review interface (Ops view).
- Data persistence: connection records stored per employee; each claim linked to a connection type.

5.2 Out of Scope

- Real-time integration with telecom providers (TRAI, Jio, Airtel, etc.) for number verification.
- OTP-based verification of mobile numbers at time of whitelisting.
- Employer-level restrictions on eligible connection types (deferred to future release).
- Changes to the existing claim submission entry point or overall claim form layout beyond the new 'Select Connection' field.
- Multi-country support or international number formats (India-only in this release).

6. Detailed Scenarios

ID	Scenario Name	Actor	Preconditions	Steps	Expected Outcome	Edge Cases / Notes
SC-01	Add new mobile connection (first time)	Employee	Employee has 0 connections whitelisted; is on claim form	1. Clicks 'Select Connection' dropdown. 2. Selects '+ Add New Connection'. 3. Chooses Type:	Connection saved with +91 prefix. Dropdown now shows the new connection as selected. Employee proceeds with claim.	System auto-prefixes +91. Number stored as +91XXX XXXXXX internally.

				Mobile , Subtype: Postpaid. 4. Enters 10-digit mobile number. 5. Saves connection.		
SC-02	Add new broadband connection	Employee	Employee has < 4 connections; is on claim form	1. Selects '+' Add New Connection'. 2. Chooses Type: Broadband, Subtype: Postpaid. 3. Enters broadband account/number.	Broadband connection saved and available in dropdown. Employee selects it and continues claim.	Broadband/Landline numbers may not be 10 digits — define separate validation (see FR-05).

				4. Saves.		
SC-03	Add new landline connection	Employee	Employee has < 4 connections	1. Select s '+' Add New Connection'. 2. Chooses Type: Landline, Subtype: Postpaid. 3. Enters STD code + number. 4. Saves.	Landline connection saved. Visible in dropdown for future claims.	Landline format: STD code (2–4 digits) + number (6–8 digits). Total max 12 digits. No +91 prefix for landline.
SC-04	Add new Data Card connection	Employee	Employee has < 4 connections	1. Select s '+' Add New Connection'. 2. Chooses Type: Data Card, Subtype:	Data Card connection saved with +91 prefix. Available in dropdown.	Data Card uses mobile number format (10 digits). Same +91 prefix and duplicat

				Prepaid. 3. Enters 10-digit mobile number associated with data card. 4. Saves.		e rules apply.
SC-05	Reach maximum connection limit (4)	Employee	Employee already has 4 whitelisted connections	1. Opens claim form. 2. Clicks 'Select Connection' dropdown. 3. Attempts to click '+ Add New Connection'.	System displays inline message : 'You have reached the maximum limit of 4 connections.' Add New option is disabled.	The '+ Add New Connection' option should be greyed out or hidden when limit is reached.
SC-06	Duplicate mobile number entry	Employee	Employee has already added mobile	1. Attempts to add a new connection	System displays error: 'This number	Duplicate check is case-insensitive and

			number 987654 3210	ction with the same numb er 98765 43210. 2. Submi ts add form.	is already registre d. Please select it from your existing connecti ons.' Connecti on is not saved.	ignores +91 prefix for compari son.
SC-07	Invalid mobile number – less than 10 digits	Employee	Employee is on 'Add New Connecti on' form, Type: Mobile	1. Enters 9-digit numb er (e.g., 98765 4321). 2. Attem pts to save.	Inline validatio n error: 'Mobile number must be exactly 10 digits.' Form does not submit.	Validatio n fires on blur and on submit attempt.
SC-08	Invalid mobile number – more than 10 digits	Employee	Employee is on 'Add New Connecti on' form, Type: Mobile	1. Enters 11- digit numb er. 2. Attem pts to save.	Inline validatio n error: 'Mobile number must be exactly 10 digits.' Form	Input field should restrict entry to max 10 numeric characte rs for mobile type.

					does not submit.	
SC-09	Submit claim with selected connection	Employee	Employee has ≥ 1 whitelisted connection; claim form is open	1. Selects existing connection from dropdown. 2. Fills remaining claim fields. 3. Submits claim.	Claim submitted successfully. Claim record stores connection ID, type, and number. Claim summary shows connection details.	Connection details are immutable post-submission — even if employee later edits/removes the connection.
SC-10	Submit claim without selecting connection	Employee	Employee is on claim form; 'Select Connection' field is empty	1. Fills all other claim fields. 2. Attempts to submit without selecting a connection.	Form submission blocked. Error message: 'Please select a connection to proceed.' Field highlighted in	This is a mandatory field. No bypass allowed.

					error state.	
SC-11	View claim summary with connection details	Employee	Claim has been submitted successfully	1. Employee navigates to claim summary page after submission.	Claim summary displays: Connection Type (e.g., Mobile – Postpaid), Connection Number (+91 92345 67890).	show mobile number
SC-12	View claim history with connection details	Employee	Employee has ≥ 1 submitted telecom claim	1. Employee navigates to Claim History. 2. Opens a past telecom claim.	Claim detail view shows connection type and masked number linked to that claim.	Historical claims submitted before this feature launch will show 'Connection: Not Available'.
SC-13	Ops team views claim with connecti	Ops Team	A telecom claim has been submitte	1. Ops opens claim in review	Ops sees: Connection Type, Connection	Ops view shows full unmaske

	on details		d by an employee	interfa ce. 2. Views claim details .	Subtype (Prepaid/ Postpaid), Full Connection Number (unmask ed for Ops), and Claim details.	number for verificati on purpose s. Access controlle d by role.
SC-14	Employee removes an existing connection	Employee	Employee has ≥ 1 whitelisted connection with no pending claims linked	1. Navig ates to connection mana geme nt sectio n. 2. Select s connection to remov e. 3. Confir ms deletio n.	Connecti on removed from whitelist. No longer appears in claim form dropdown. Past claims linked to this connecti on retain the connecti on snapsho t data.	If connecti on has a pending/ in- review claim, deletion should be blocked with message : 'Cannot remove connecti on with an active claim.'

SC-15	Employee enters number with +91 prefix manually	Employee	Employee is on 'Add New Connection' form, Type: Mobile	1. Enters '+919 87654 3210' in the number field.	System strips the +91 prefix, retains 10-digit number, and saves as +91 987654 3210 internally. No duplicate prefix stored.	Input sanitization must handle both '91XXXX XXXXXX' and '+91XXXX XXXXXX' formats.
SC-16	Claim submitted before feature launch (legacy claim)	Employee / Ops	Claim was submitted before connection whitelisting was introduced	1. Employee or Ops views a legacy telecom claim.	Connection field displays: 'Not Available – Submitted before connection whitelisting was enabled.'	No backfill required. Legacy claims are unaffected by new validation rules.
SC-17	Employee with no whitelisted connections	Employee	Employee has 0 connections whitelisted	1. Opens Telecom & Data wallet.	'Select Connection' dropdown shows only '+'	Consider showing a contextual nudge/b

	opens claim form			2. Clicks Reimbursement CTA. 3. Claim form opens.	Add New Connection' option. Employee must add a connection before proceeding.	anner: 'Add your telecom connection to submit a claim.'
--	------------------	--	--	--	---	---

7. Functional Requirements

7.1 Connection Management

Req ID	Requirement	Priority	Notes
FR-01	Each employee can whitelist a maximum of 4 connections across all types.	Must Have	Limit enforced at save time.
FR-02	Supported connection types: Mobile, Data Card, Broadband, Landline. Each must have a subtype: Prepaid or Postpaid.	Must Have	Both type and subtype are mandatory fields.
FR-03	Employee can view their list of	Must Have	Connection management

	whitelisted connections from within the claim form (via dropdown) and from a dedicated connection management section.		section location TBD with UX team.
FR-04	Employee can delete a whitelisted connection, subject to no active/pending claims being linked to it.	Must Have	Deletion blocked if claim is in Pending/Under Review status.

7.2 Validation Rules

Req ID	Requirement	Priority	Notes
FR-06	Mobile and Data Card numbers must be exactly 10 numeric digits.	Must Have	Validated on blur and on form submit.
FR-07	System must auto-prefix +91 to Mobile and Data Card numbers. If employee enters +91 or 91 prefix, system strips	Must Have	Stored internally as +91XXXXXXXXXX.

	and re-applies correctly.		
FR-08	Broadband and Landline numbers: STD code (2–4 digits) + subscriber number (6–8 digits). Total max 12 digits. No +91 prefix.	Must Have	Separate validation logic for non-mobile types.
FR-09	Duplicate connection numbers (same type + same number) must be rejected with an appropriate error message.	Must Have	Duplicate check is per employee, not global.
FR-10	International numbers (non-India) are not supported in this release. If a non-Indian number format is detected, display error: 'Only Indian numbers are supported.'	Must Have	Assumption: India-only release.
FR-11	Number input field must accept only numeric characters. Non-numeric input	Must Have	Client-side input restriction.

	(except leading + for prefix) must be rejected in real time.		
--	--	--	--

7.3 Claim Form Integration

Req ID	Requirement	Priority	Notes
FR-12	'Select Connection' is a mandatory field in the Telecom & Data reimbursement claim form. Claim cannot be submitted without a selected connection.	Must Have	Field validation fires on submit attempt.
FR-13	The 'Select Connection' dropdown must display: all whitelisted connections	Must Have	Show the number
FR-14	Selecting '+ Add New Connection' opens an inline or modal form for connection registration without navigating away	Must Have	Prevents loss of partially filled claim data.

	from the claim form.		
FR-15	Upon successful addition of a new connection, it must be auto-selected in the 'Select Connection' dropdown and the add form must close.	Must Have	Improves UX flow continuity.
FR-16	If employee has reached the 4-connection limit, the '+ Add New Connection' option must be disabled/hidden in the dropdown.	Must Have	Show tooltip: 'Maximum 4 connections allowed.'

7.4 Ops Team View

Req ID	Requirement	Priority	Notes
FR-17	Ops claim review interface must display: Connection Type, Connection Subtype, Full (unmasked) Connection Number, and	Must Have	Unmasked number for Ops only — role-based access.

	Date connection was added.		
FR-18	Legacy claims (pre-feature launch) must display 'Connection: Not Available' in Ops view.	Must Have	No backfill required.

7.6 Employee Visibility

Req ID	Requirement	Priority	Notes
FR-19	Claim summary page (post-submission) must display connection type and masked number.	Must Have	
FR-20	Claim history detail view must display connection type and number for each telecom claim.	Must Have	Consistent masking across all employee-facing views.

8. Edge Cases & Validation Rules

Edge Case	Trigger	System Behavior	Error Message
-----------	---------	-----------------	---------------

Max connections reached	Employee tries to add 5th connection	Block add action; disable '+ Add New Connection'	You have reached the maximum limit of 4 connections.
Duplicate number (same employee)	Employee enters a number already in their whitelist	Block save; highlight number field	This number is already registered in your connections.
Invalid mobile number length	Mobile/Data Card number $\neq$ 10 digits	Block save; inline field error	Mobile number must be exactly 10 digits.
Non-numeric input	Employee enters letters or special characters in number field	Real-time rejection of non-numeric characters	Input field restricts to numeric only (no error message needed).
+91 prefix entered manually	Employee types +91 before 10-digit number	Strip prefix, retain 10 digits, auto-apply +91 on save	No error; silent normalization.
Submit claim without connection	Employee submits claim with empty 'Select Connection'	Block submission; highlight field	Please select a connection to proceed.
Delete connection with active claim	Employee tries to delete connection linked to a pending/in-review claim	Block deletion	Cannot remove this connection as it is linked to an active claim.

International number format	Employee enters number starting with country code other than +91	Block save	Only Indian mobile numbers (+91) are supported.
Broadband/Landline number too short/long	Employee enters < 8 or > 12 digits for broadband/landline	Block save; inline field error	Please enter a valid broadband/landline number (8–12 digits).
Session timeout during add connection	Employee's session expires while on 'Add New Connection' form	Redirect to login; unsaved connection data is lost	Standard session timeout message.

9. Open Questions

#	Question	Options / Considerations	Decision Owner	Status
OQ-01	Can employees edit a connection's type or subtype after adding (without changing the number)?	Option A: Allow edit of type/subtype only. Option B: No edits allowed — delete and re-add. Recommendation: Option B for simplicity and audit integrity.	Product + Engineering	Open

OQ-02	Should connection addition require Ops/Admin approval before it can be used in a claim?	Option A: Self-service (no approval needed). Option B: Admin approval required. Recommendation: Option A for v1 to reduce friction; revisit based on fraud data.	Product + Compliance	Open
OQ-03	Should there be employer-level restrictions on eligible connection types?	Option A: All 4 types allowed for all employers. Option B: Employer-configurable connection type whitelist. Recommendation: Option A for v1; Option B as a future enhancement.	Product + Client Success	Open
OQ-04	Should the connection	Yes, under account	Product + UX	Open

	management section be accessible outside the claim form?	details		
OQ-05	Should employees be notified (in-app or email) when a connection is added or deleted?	Notification adds security value (alerts employee to unauthorized changes). Recommendation: In-app notification for v1; email notification as future enhancement.	Product + Engineering	Open
OQ-06	What is the behavior when an employee is offboarded from the benefit proposition?	Recommendation: Soft-delete (archive) connections on offboarding to preserve audit trail.	Product + Engineering + HR	Open
OQ-07	Should the 4-connection limit be configurable at the	Option A: Fixed at 4 for all. Option B: Employer-configurable (e.g., 2–6).	Product	Open

	employer level?	Recommend ation: Fixed at 4 for v1.
