

Exit Employee Management

<https://exit-settle-guard.lovable.app>

01 — Executive Summary

The Exit Management Module is a new feature within the Back Office Tool (BOT) under the Partnership Tab, designed to give Ops teams structured, auditable control over the employee exit lifecycle for Benefit Card users.

When an employee leaves a corporate partner, their Telecom and Fuel wallet balances must be settled back into the General wallet. Currently, this process is manual, error-prone, and lacks a centralised tracking mechanism. This feature automates fund settlement on the scheduled exit date, provides real-time status visibility, and creates a complete audit trail for every exit action.

Business Impact

Dimension	Current State	Post-Feature State
Fund Settlement	Manual, delayed, inconsistent	Automated on exit date execution
Ops Effort per Exit	High — multiple manual steps	Low — single scheduling action
Compliance & Audit	No structured trail	Full timestamped audit log per exit
Visibility	Fragmented across tools	Centralised dashboard with live counts
Error Rate	High (manual entry)	Reduced via validation + idempotency

02 — Problem Statement

2.1 Current Pain Points

Core Problem: There is no structured, automated mechanism to manage employee exits for Benefit Card users. Ops teams rely on manual processes that are slow, inconsistent, and unauditable.

#	Pain Point	Impact
P1	Manual tracking of employee exits across spreadsheets or tickets	High Ops overhead; missed exits
P2	No structured exit lifecycle — no defined statuses or transitions	Confusion on exit state; no SLA enforcement
P3	Fund settlement (Telecom/Fuel → General wallet) done manually or not at all	Financial leakage; compliance risk
P4	No audit trail for who scheduled, modified, or cancelled an exit	Accountability gaps; audit failures
P5	No dashboard visibility on pending, failed, or completed exits	Ops managers lack operational oversight
P6	Re-adding cancelled employees has no defined process	Duplicate records; data inconsistency

2.2 Why Now

- Growing corporate partner base increases exit volume, making manual processes unsustainable.
- Regulatory and compliance requirements demand auditability of fund movements.
- Ops team capacity is constrained — automation is the only scalable path.

03 — Goals & Success Metrics

3.1 Goals

- Provide Ops a single interface to schedule and manage all employee exits.
- Automate fund settlement (Telecom + Fuel → General wallet) on exit date.
- Deliver real-time dashboard visibility on exit pipeline health.
- Ensure every exit action is fully auditable with timestamps and actor identity.
- Reduce failed settlements through retry mechanisms and clear failure visibility.

3.2 Success Metrics (KPIs)

KPI	Target	Description
Auto-Settlement Rate	≥ 95%	Exits settled without manual intervention
Failed Settlement Rate	≤ 3%	Of total exits processed per month
Ops Time per Exit	≤ 2 min	From search to scheduled (down from ~15 min)
Dashboard Load Time	≤ 2 sec	P95 latency for dashboard render
Audit Coverage	100%	All exit actions logged with actor + timestamp
Duplicate Exit Rate	0%	System prevents duplicate active exits

04 — User Personas

Persona 1: Ops Executive — Primary Actor

Attribute	Detail
-----------	--------

Primary Goal	Quickly schedule employee exits and confirm fund settlement
Key Tasks	Search employee, add to exit queue, update/cancel exit, view settlement details
Pain Points	Manual tracking, no confirmation of settlement, no single view of exit status
Needs	Fast search, clear status labels, simple exit scheduling flow, settlement confirmation
Access Level	Can add, update, cancel exits; cannot override system-triggered status transitions

Persona 2: Ops Manager — Secondary Actor

Attribute	Detail
Primary Goal	Monitor exit pipeline health, identify failures, ensure SLA compliance
Key Tasks	Review dashboard metrics, investigate failed settlements, approve retries
Pain Points	No aggregate view of exit health; cannot distinguish failed vs. pending exits
Needs	Dashboard with actionable counts, date-range filters, audit trail access
Access Level	Read access to all exits; elevated permissions for retry/override actions

Persona 3: Employee (Benefit Card Holder) — Impacted User

Attribute	Detail
Primary Goal	Be informed of last working day and utilise remaining wallet funds before exit date
Key Tasks	View last working day banner, read email notification, use Telecom/Fuel wallet funds before exit
Pain Points	Unaware of fund movement date; surprised by wallet balance changes; no visibility on settlement
Needs	Timely notification of exit date, clear guidance on fund utilisation window, settlement confirmation
Access Level	Read-only; cannot modify or cancel exit; receives automated notifications only

05 — Scope

In Scope

- Exit scheduling via BOT (Partnership → Exit Management)
- Employee search using: Name, Business Name, Phone, Email, Business ID, User ID
- Exit lifecycle tracking with defined statuses
- Automated fund settlement: Telecom wallet → General wallet; Fuel wallet → General wallet
- Dashboard metrics: Exit Today, Pending Exits, Failed to Settle, Retention
- Settlement detail view (Transaction ID, wallet, amount, narration, status)
- Exit date update and cancellation (where status permits)
- Re-adding cancelled employees
- Full audit trail per exit record

- Employee-facing mobile app banners (home screen, Telecom wallet, Fuel wallet)
- Employee email notifications (exit scheduled, settlement confirmed)

Out of Scope

- HR communication workflows (email to/from corporates)
- Manual fund transfer handling by Ops
- UI/visual design specifications
- Deep technical architecture and API design
- Employee onboarding or card issuance flows
- Corporate partner portal access
- Payroll integration
- Notification/alert system for corporate partners (v1.0)

06 — Functional Requirements

6.1 Employee Search

FR ID	Requirement	Notes
FR-S01	Ops can search employees using: Name, Business Name, Phone Number, Email, Business ID, User ID	Any single identifier must return results
FR-S02	Search results display: Employee Name, Business Name, User ID, Phone, Email, Card Status	Enough context to confirm correct employee
FR-S03	Search must return results within 2 seconds	Performance requirement
FR-S04	If no results found, display 'No employee	Avoid blank states

	found' with guidance to refine search	
FR-S05	If employee already has an active exit (Scheduled/Processing), display warning before selection	Duplicate prevention

6.2 Exit Creation Flow

FR ID	Requirement	Notes
FR-C01	Ops clicks 'Add New Employee' CTA on Exit Management page	Entry point to exit creation
FR-C02	Ops searches and selects employee from results	Selection confirms identity
FR-C03	Ops enters Exit Date (date picker, future dates only by default)	Past date handling: see Edge Cases
FR-C04	System displays confirmation summary before saving: Employee name, Business, Exit Date, Wallet balances	Prevents accidental submissions
FR-C05	On confirmation, employee added to Exit Management list with status = Scheduled	Immediate status assignment
FR-C06	System records: Created By (Ops user ID), Created At (timestamp)	Audit trail initiation

FR-C07	System must prevent duplicate active exit entries for the same employee	Block if Scheduled or Processing exists
--------	---	---

6.3 Exit Status Management

FR ID	Requirement	Notes
FR-ST01	On exit date, system automatically transitions status: Scheduled → Processing	System-triggered, not manual
FR-ST02	On successful fund transfer completion: Processing → Settled	Both Telecom and Fuel wallets must settle
FR-ST03	On fund transfer failure: Processing → Failed	Trigger flag for Ops visibility
FR-ST04	Ops can cancel a Scheduled exit → status = Cancelled	Not allowed once Processing has started
FR-ST05	Cancelled employees can be re-added via 'Add New Employee' → status resets to Scheduled	Previous cancelled record retained for audit

6.4 Dashboard Requirements

FR ID	Metric	Definition	Default Date Range
FR-D01	Exit Today	Count of exits with exit date =	Current date

		today (any status)	
FR-D02	Pending Exits	Count of all exits with status = Scheduled	All time (no expiry)
FR-D03	Failed to Settle	Count of exits with status = Failed	Last 30 days (configurable)
FR-D04	Retention	Count of exits with status = Cancelled	Last 30 days (configurable)
FR-D05	Date Range Filter	Ops can adjust date range for Failed to Settle and Retention	30 days default

6.5 Employee Exit Detail View

FR ID	Requirement	Condition
FR-EV01	Show total wallet balance (Telecom + Fuel + Meal + Rewards + General) at top of detail view	All statuses
FR-EV02	Show current exit status with visual indicator	All statuses
FR-EV03	Show Settlement Summary: Transaction ID, Wallet Name, Amount Moved, Narration, Status	Status = Settled

FR-EV04	Allow Ops to update exit date	Status = Scheduled only
FR-EV05	Allow Ops to cancel exit	Status = Scheduled only
FR-EV06	Show audit trail: Added On, Last Updated On, action history with actor	All statuses
FR-EV07	Show failure reason and recommended action	Status = Failed

6.6 Audit Trail Requirements

FR ID	Event to Log	Data Captured
FR-A01	Exit Created	Actor (Ops User ID), Timestamp, Exit Date set, Employee ID
FR-A02	Exit Date Updated	Actor, Timestamp, Old Exit Date, New Exit Date
FR-A03	Exit Cancelled	Actor, Timestamp, Reason (if captured)
FR-A04	Status Transition	System, Timestamp, From Status, To Status
FR-A05	Settlement Executed	System, Timestamp, Transaction IDs, Amounts, Wallet names
FR-A06	Settlement Failed	System, Timestamp, Failure reason/error code

FR-A07	Employee Re-added	Actor, Timestamp, Reference to previous Cancelled record
--------	-------------------	--

07 — Scenario Mapping: Happy Flows

ID	Scenario	Actor	Preconditions	Steps	Expected Outcome
HF-01	Add employee to exit queue (future date)	Ops Executive	Employee exists in BOT; no active exit for this employee	1. Navigate to Partnerships → Exit Management 2. Click 'Add New Employee' 3. Search by name/email/phone 4. Select correct employee 5. Enter future exit date 6. Confirm on	Employee appears in list with status = Scheduled . Audit log entry created.

				summary screen	
HF-02	Scheduled → Processing → Settled (full happy path)	System (automated)	Employee in Scheduled status; exit date = today; Telecom and Fuel wallets have balance	1. System detects exit date reached 2. Status → Processing 3. Telecom wallet → General wallet transfer 4. Fuel wallet → General wallet transfer 5. Both transfers succeed	Status = Settled. Settlement summary populated with Transaction IDs, amounts, narration. Audit log updated.
HF-03	View settlement details after successful exit	Ops Executive	Employee status = Settled	1. Navigate to Exit Management list 2. Search/filter for employee 3. Click on employee record	Ops sees: Transaction ID, Wallet Name, Amount Moved, Narration, Status = Success for each wallet.

				4. View Settlement Summary section	
HF-04	Update exit date before processing	Ops Executive	Employee status = Scheduled	1. Open employee detail view 2. Click 'Update Exit Date' 3. Select new future date 4. Confirm change	Exit date updated. Status remains Scheduled. Audit log records old date, new date, actor, timestamp.
HF-05	Cancel a scheduled exit	Ops Executive	Employee status = Scheduled	1. Open employee detail view 2. Click 'Cancel Exit' 3. Confirm cancellation on prompt	Status = Cancelled. Employee removed from active exit queue. Dashboard Retention count increments.
HF-06	Re-add a previously	Ops Executive	Employee has a prior exit with	1. Click 'Add New	New exit record created

	cancelled employee		status = Cancelled	Employee' 2. Search for employee 3. System shows prior cancelled exit as context 4. Ops selects employee and enters new exit date 5. Confirm	with status = Scheduled . Previous Cancelled record retained in audit history.
HF-07	Zero balance exit (no funds to transfer)	System (automated)	Employee in Scheduled status; exit date = today; both wallets have ₹0 balance	1. System detects exit date reached 2. Status → Processing 3. System checks wallet balance — both ₹0 4. No transfer	Status = Settled. Settlement summary shows ₹0 transferred. Narration: 'Zero balance — no transfer required.'

				needed; system marks complete	
--	--	--	--	--	--

08 — Scenario Mapping: Edge Cases

ID	Edge Case	Description	System Behavior	Suggested Solution
EC-01	Duplicate exit entry	Ops attempts to add an employee who already has an active exit (Scheduled or Processing)	System detects existing active exit during employee selection. Blocks creation.	Display inline warning: 'This employee already has an active exit scheduled for [date]. Please update or cancel the existing exit.' Provide quick link to existing exit record.
EC-02	Exit date in the past	Ops enters an exit date earlier than today's date	Date picker restricts past dates by default. If bypassed, server-side validation rejects.	Disable past dates in date picker. Return error: 'Exit date cannot be in the past.' Define cut-off time for

				same-day exits (see OQ-03).
EC-03	Exit date updated after processing started	Ops attempts to change exit date when status = Processing	System blocks the update. 'Update Exit Date' option is disabled/hidden in Processing state.	Grey out / hide 'Update Exit Date' CTA when status ≠ Scheduled. Show tooltip: 'Exit date cannot be changed once processing has started.'
EC-04	Fund transfer failure (full)	Both wallet transfers fail during Processing (e.g., system error, timeout)	Status → Failed. Failure reason and error code logged. Dashboard 'Failed to Settle' count increments.	Show failure reason in detail view. Provide 'Retry Settlement' CTA (Ops Manager only). Log retry attempts in audit trail. Escalate if retry also fails.
EC-05	Partial fund transfer success	Telecom wallet transfer succeeds but Fuel wallet	Status = Failed (partial). Settlement summary	Mark overall status as Failed with sub-status 'Partial

		transfer fails (or vice versa)	shows one wallet as Success and one as Failed. Successful transfer is not reversed.	Settlement.' Retry should only re-attempt the failed wallet (idempotency check on successful wallet).
EC-06	Employee not found in search	Ops searches using valid-looking identifiers but no employee record is returned	System returns 'No employee found' message. No action taken.	Display: 'No employee found. Please verify the details or contact your system administrator .' Provide guidance on which identifiers to try.
EC-07	Cancel after processing started	Ops attempts to cancel an exit when status = Processing	System blocks cancellation. 'Cancel Exit' CTA is disabled/hidden in Processing state.	Grey out / hide 'Cancel Exit' when status ≠ Scheduled. Show tooltip: 'Exit cannot be cancelled once fund transfer has started. Contact your supervisor

				for escalation.'
EC-08	Re-adding a cancelled employee	Ops adds an employee whose most recent exit status = Cancelled	System allows re-addition. Previous cancelled record is retained. New exit record created with status = Scheduled.	During search, display prior cancelled exit as contextual note: 'This employee had a previously cancelled exit on [date].' New record links to prior record in audit trail.
EC-09	Zero wallet balance at exit	Employee has ₹0 in both Telecom and Fuel wallets on exit date	System detects zero balance. No transfer initiated. Exit marked as Settled with ₹0 settlement.	Settlement summary shows: 'No funds transferred — wallet balance was ₹0 at time of exit.' Status = Settled. This is a valid, non-error outcome.
EC-10	Same-day exit scheduling	Ops schedules an exit for the current date	Depends on cut-off time policy. Before cut-	Define a daily cut-off time (e.g., 3:00 PM).

			off: accepted and processed same day. After cut-off: rejected or deferred.	Before cut-off: allow same-day exit, trigger processing immediately. After cut-off: show warning and suggest next business day.
EC-11	Ops session expires mid-flow	Ops session times out while filling exit creation form	Form data is lost. No partial exit record created. User redirected to login.	Implement form auto-save or session extension warning. On re-login, redirect Ops back to Exit Management . No orphaned records created.
EC-12	Duplicate fund transfer execution	System attempts to execute the same exit transfer twice (e.g., retry or system glitch)	Idempotency check prevents duplicate execution. Second attempt is rejected silently.	Each exit execution must carry a unique idempotency key (Exit ID + Execution Date). Payment system must

				reject duplicate keys. Log duplicate attempt in audit trail.
--	--	--	--	--

09 — Status Transition Logic

9.1 Allowed Transitions

From Status	To Status	Trigger	Actor	Reversible?
Scheduled	Processing	Exit date reached (system job runs)	System	No
Scheduled	Cancelled	Ops manually cancels exit	Ops Executive	No (re-add creates new record)
Processing	Settled	All fund transfers complete successfully	System	No
Processing	Failed	One or more fund transfers fail	System	Via Retry
Failed	Processing	Ops triggers retry (if retry is enabled)	Ops / System	Yes (retry loop)

Failed	Manual Intervention	Retry exhausted; escalated to Ops Manager	Ops Manager	N/A
Cancelled	Scheduled	Ops re-adds employee via 'Add New Employee'	Ops Executive	Creates new record

9.2 Blocked Transitions

Attempted Transition	Reason Blocked
Processing → Cancelled	Fund transfer already in progress; cannot be reversed
Processing → Scheduled	Cannot revert once execution has started
Settled → Any	Terminal state; settlement is final
Cancelled → Processing	Must go through Scheduled first via re-add

10 — Data Requirements

10.1 Exit Record — Core Fields

Field	Type	Required	Notes
Exit ID	UUID	Yes	System-generated unique identifier
Employee ID (User ID)	String	Yes	Links to employee record in BOT

Employee Name	String	Yes	Denormalized for display
Business ID	String	Yes	Corporate partner identifier
Business Name	String	Yes	Denormalized for display
Phone Number	String	Yes	For search and identification
Email	String	Yes	For search and identification
Exit Date	Date	Yes	Scheduled date of exit execution
Status	Enum	Yes	Scheduled / Processing / Settled / Failed / Cancelled
Telecom Wallet Balance (snapshot)	Decimal	Yes	Snapshot at time of exit creation
Fuel Wallet Balance (snapshot)	Decimal	Yes	Snapshot at time of exit creation
General Wallet Balance (snapshot)	Decimal	Yes	Snapshot at time of exit creation
Created By	String (Ops User ID)	Yes	Audit: who created the exit
Created At	Timestamp	Yes	Audit: when exit was created
Last Updated By	String (Ops User ID)	Yes	Audit: who last modified

Last Updated At	Timestamp	Yes	Audit: when last modified
Cancellation Reason	String	No	Optional; captured if Ops provides reason
Previous Exit ID	UUID	No	Reference to prior cancelled exit (for re-adds)

10.2 Settlement Record — Per Wallet

Field	Type	Notes
Settlement ID	UUID	Unique per wallet transfer
Exit ID	UUID	Foreign key to Exit Record
Transaction ID	String	Payment system transaction reference
Wallet Name	Enum	Telecom / Fuel
Amount Transferred	Decimal	Actual amount moved
Transaction Narration	String	e.g., 'Exit settlement — Telecom wallet'
Settlement Status	Enum	Success / Failed / Skipped (zero balance)
Failure Reason	String	Error code + description if failed
Executed At	Timestamp	When transfer was attempted

11 — Risks & Mitigations

#	Risk	Likelihood	Impact	Mitigation
R1	Incorrect exit date entered by Ops	Medium	High	Date picker validation (no past dates); confirmation screen; audit trail for date changes
R2	Duplicate fund transfer execution	Low	Critical	Idempotency key per exit execution; payment system deduplication; audit log for all transfer attempts
R3	Ops cancels wrong employee exit	Medium	High	Confirmation dialog with employee name + business name; cancellation logged with actor; re-add flow available
R4	Fund transfer failure at scale	Low	High	Auto-retry (3 attempts); Failed status with clear reason; Ops Manager visibility;

				manual intervention path defined
R5	Exit processing job failure (system downtime)	Low	High	Job must be idempotent and resumable; missed exits re-queued on system recovery; alerting for job failures
R6	Partial settlement leaving funds in wrong wallet	Medium	Medium	Per-wallet settlement tracking; retry only failed wallet; clear sub-status in Settlement Summary
R7	Wrong employee selected by Ops	Medium	High	Confirmation screen with full employee details; cancel option while Scheduled; audit trail for accountability
R8	Data inconsistency between	Low	High	Wallet balance snapshot at

	BOT and payment system			exit creation; reconciliation job to verify settlement amounts post-execution
--	------------------------	--	--	---

12 — Open Questions

OQ ID	Question	Stakeholders	Priority
OQ-01	Can exit date be edited after processing has started (status = Processing)?	Ops, Engineering	High
OQ-02	Should Ops be allowed to manually retry failed settlements? Or is retry fully automated?	Ops, Engineering, Finance	High
OQ-03	Is there a cut-off time for same-day exits? (e.g., exits scheduled for today after 3 PM — processed today or next day?)	Ops, Engineering	High
OQ-04	Should any notifications be triggered? (e.g.,	Ops, Product, Partnerships	Medium

	to Ops on settlement success/failure, or to corporate partner)		
OQ-05	What is the maximum number of retry attempts for a failed settlement before it requires manual intervention?	Engineering, Finance	High
OQ-06	Should Ops be required to provide a reason when cancelling an exit?	Ops, Compliance	Medium
OQ-07	What happens to funds in the General wallet after settlement — frozen, returned to corporate, or remain accessible?	Finance, Compliance, Partnerships	High
OQ-08	Should the dashboard support export (CSV/Excel) of exit records for reporting?	Ops Manager, Compliance	Medium
OQ-09	Is there a role distinction	Ops, Engineering	Medium

	between Ops Executive and Ops Manager in terms of permissions (e.g., only Manager can retry)?		
OQ-10	Should exits be processed on weekends and public holidays, or deferred to the next business day?	Ops, Finance, Engineering	Medium

14 — Proposed Solutions for Open Questions

OQ-01 — Can exit date be edited after processing starts?

Recommendation: No. Once status = Processing, the fund transfer is in flight. Allowing date changes at this point creates reconciliation complexity and financial risk. Block the action at the UI and API level. If a genuine error occurred, Ops Manager should have an escalation path (manual intervention) rather than a date edit. This keeps the system simple and prevents mid-flight interference.

OQ-02 — Should Ops be allowed to manually retry failed settlements?

Recommendation: Yes, with guardrails. Allow up to 3 automated retries with exponential backoff (e.g., 5 min, 15 min, 30 min). After 3 failures, surface a 'Retry Settlement' CTA visible to Ops Manager only. Each retry attempt is logged in the audit trail with actor and timestamp. This balances automation with human oversight for persistent failures without requiring engineering intervention for every failure.

OQ-03 — Cut-off time for same-day exits?

Recommendation: Define a daily cut-off time of 3:00 PM (local time). Before 3:00 PM: allow same-day exit scheduling; system triggers processing immediately. After 3:00 PM: display a warning — 'Same-day exit cut-off has passed. This exit will be processed on the next business day.' This prevents race conditions with end-of-day batch jobs and gives the payment system adequate processing time.

OQ-04 — Should notifications be triggered?

Recommendation: Yes, in a phased approach. Phase 1 (MVP): In-app notifications within BOT for Ops — notify on settlement success, settlement failure, and retry exhaustion. Phase 2: Email notifications to Ops Manager for failed settlements requiring manual intervention. Corporate partner notifications are out of scope for v1.0 and should be revisited based on partner demand.

OQ-05 — Maximum retry attempts before manual intervention?

Recommendation: 3 automated retries with exponential backoff. After the 3rd failure, status remains Failed and a flag is raised for Ops Manager. The retry window should be within the same business day. If the exit date has passed and retries are exhausted, the record should be escalated to a 'Pending Manual Review' sub-status visible on the dashboard. This prevents indefinite retry loops while ensuring failures are not silently dropped.

OQ-06 — Should Ops be required to provide a cancellation reason?

Recommendation: Optional for Ops Executive, mandatory for Ops Manager when overriding a Processing-state exit (if that capability is ever introduced). For standard Scheduled cancellations, make the reason field optional but present — this encourages documentation without creating friction. Captured reasons should be stored in the audit trail and visible in the exit detail view.

OQ-07 — What happens to funds in the General wallet after settlement?

Recommendation: This is a Finance and Compliance decision. Recommended approach: funds settled into the General wallet remain accessible to the corporate partner for reallocation (e.g., to other employees). The General wallet should not be automatically frozen post-settlement.

However, a settlement event should be logged and visible to the corporate partner in their portal (out of scope for v1.0). Finance team to confirm if any regulatory hold period applies.

OQ-08 — Should the dashboard support data export?

Recommendation: Yes. Provide a CSV export of the exit records list with applied filters (date range, status). This is a low-effort, high-value feature for Ops Managers who need to report on exit volumes, failure rates, and settlement timelines. Export should include: Employee Name, Business Name, Exit Date, Status, Settlement Amount, Settlement Date, Created By. Limit export to 10,000 records per request to prevent performance issues.

OQ-09 — Role distinction between Ops Executive and Ops Manager?

Recommendation: Yes. Implement a two-tier permission model. Ops Executive: can add, update exit date, and cancel exits (Scheduled status only). Ops Manager: all Ops Executive permissions + ability to retry failed settlements + ability to view full audit logs across all Ops users + access to export functionality. This separation ensures accountability and prevents junior Ops staff from performing high-risk actions like retrying failed fund transfers.

OQ-10 — Should exits be processed on weekends and public holidays?

Recommendation: Recommended: Process exits on all calendar days including weekends. Benefit card fund settlements are system-automated and do not require human intervention, so there is no operational reason to defer them. However, if the underlying payment rails (e.g., NEFT/IMPS) have restrictions on public holidays, the system should detect this and defer to the next available processing day, notifying Ops of the deferral. Engineering to confirm payment rail availability.

15 — Employee Journey: Mobile App & Notifications

While the Ops team manages the exit lifecycle via BOT, the employee (benefit card holder) receives timely, contextual communication through the mobile app and email. This ensures employees are aware of their last working day, can utilise remaining wallet funds before settlement, and are not caught off-guard by fund movements.

15.1 Overview

The employee journey is read-only and informational — employees cannot modify or cancel their exit. All touchpoints are triggered automatically based on the exit date set by Ops in BOT.

15.2 Employee Touchpoints

Touchpoint	Channel	Trigger	Content	Timing
Last Working Day Banner	Mobile App — Home Screen	Exit record created (status = Scheduled)	Banner: 'Your last working day is [Exit Date]. Please use your Telecom and Fuel wallet funds before this date.'	Displayed from the day exit is scheduled until exit date
Fund Movement Email Notification	Email (registered email ID)	Exit record created (status = Scheduled)	Subject: 'Important: Your benefit wallet funds will be moved on [Exit Date]' Body: Informs employee that Telecom and Fuel wallet balances will be automatically transferred to the	Sent within 24 hours of exit being scheduled by Ops

			General wallet on [Exit Date]. Encourages utilisation of funds before that date.	
Wallet-Level Expiry Banner	Mobile App — Telecom Wallet Section	Exit record created (status = Scheduled)	Banner: 'Funds in this wallet will be moved to your General wallet on [Exit Date]. Use them before [Exit Date].'	Displayed from scheduling date until exit date
Wallet-Level Expiry Banner	Mobile App — Fuel Wallet Section	Exit record created (status = Scheduled)	Banner: 'Funds in this wallet will be moved to your General wallet on [Exit Date]. Use them before [Exit Date].'	Displayed from scheduling date until exit date
Settlement Confirmation Email	Email (registered email ID)	Exit status transitions to Settled	Subject: 'Your benefit wallet funds have been settled' Body: Confirms that Telecom and Fuel	Sent within 1 hour of settlement completion

			wallet balances have been transferred to the General wallet. Includes amounts transferred per wallet.	
--	--	--	---	--

15.3 Employee Journey Flow

Step	Event	Employee Experience
1	Ops schedules exit in BOT	Employee sees a banner on the mobile app home screen showing their last working day date. Telecom and Fuel wallet sections also display a banner with the fund movement date.
2	Email notification sent (within 24 hrs of scheduling)	Employee receives an email informing them that their Telecom and Fuel wallet funds will be moved to the General wallet on [Exit Date]. Email encourages them to utilise funds before that date.

3	Employee uses Telecom / Fuel wallet funds (optional)	Employee can continue to use Telecom and Fuel wallet funds normally until the exit date. Banners remain visible as a persistent reminder.
4	Exit date reached — Processing begins	No new notification at this stage. Banners remain visible. Employee cannot transact from Telecom or Fuel wallets once processing begins (wallet access restricted).
5	Settlement completed — Status = Settled	Employee receives a settlement confirmation email with the amounts transferred from each wallet to the General wallet. Banners are removed from the mobile app. General wallet balance reflects the settled amount.

15.4 Employee-Facing Functional Requirements

FR ID	Requirement	Trigger / Condition
FR-EMP01	Display a persistent banner on the mobile app home screen showing the	Status = Scheduled; visible until exit date

	employee's last working day	
FR-EMP02	Display a wallet-level banner in the Telecom wallet section stating the date funds will be moved	Status = Scheduled; visible until exit date
FR-EMP03	Display a wallet-level banner in the Fuel wallet section stating the date funds will be moved	Status = Scheduled; visible until exit date
FR-EMP04	Send an email notification to the employee's registered email within 24 hours of exit being scheduled	Exit record created (status = Scheduled)
FR-EMP05	Email must include: Exit Date, wallet names affected (Telecom, Fuel), instruction to utilise funds before exit date	Status = Scheduled
FR-EMP06	Restrict Telecom and Fuel wallet transactions once status = Processing (funds in transit)	Status = Processing
FR-EMP07	Send a settlement confirmation email once status = Settled, including amounts transferred per wallet	Status = Settled

FR-EMP08	Remove all exit-related banners from the mobile app once status = Settled or Cancelled	Status = Settled or Cancelled
FR-EMP09	If exit is cancelled by Ops, suppress all banners and do not send further notifications to the employee	Status = Cancelled
FR-EMP10	If exit is re-scheduled after cancellation, re-trigger all employee touchpoints with the new exit date	New exit record created (status = Scheduled)

15.5 Employee Journey Edge Cases

ID	Edge Case	System Behaviour
EJ-01	Exit date updated by Ops after employee has already received notification	Re-send email with updated exit date. Update banner text with new date. Previous email is superseded — no retraction needed.
EJ-02	Exit cancelled after employee received notification	Remove all banners immediately. Do not send a cancellation email to the employee (to avoid confusion). Ops team handles any necessary

		communication directly.
EJ-03	Employee has zero balance in Telecom and Fuel wallets	Banners still displayed (informational). Settlement email confirms Rs.0 transferred. No negative experience — employee is informed the process completed.
EJ-04	Settlement fails (status = Failed)	Do not notify the employee of the failure. Ops team resolves the failure internally. Once settled after retry, send the standard settlement confirmation email.
EJ-05	Employee attempts to transact from Telecom/Fuel wallet during Processing	Transaction is blocked. Display message: 'This wallet is currently being settled as part of your exit process. Funds will be available in your General wallet shortly.'
